How To Order Your Tank

If you require a fit-out different from the standard fit-out we will need some instructions from customers to ensure their tank meets their expectations. Inlet, outlet and overflow can be located to suit the customer's requirements. These locations can be specified as follows: imagine you are above your tank looking down at it. The round tank represents a clock face. The top is 12, bottom 6, right 3 and the left hand is 9 o'clock

ROUND TANK

For example, you can specify inlet at 12, overflow at 6 and outlet at 3, or anything in between.
 There is no point to specify the port location any closer then by the hour.
 (Example: not half past 6)

SLIMLINE TANK

For example you can specify inlet left hand side (L.H.S.), overflow right hand side (R.H.S.) and outlet to pump (to pump) left hand side (L.H.S.)
